

UNREADY TO WEAR

KURT VONNEGUT, JR.

I don't suppose the oldsters, those of us who weren't born into it, will ever feel quite at home being amphibious—amphibious in the new sense of the word. I still catch myself feeling blue about things that don't matter any more.

I can't help worrying about my business, for instance—or what used to be my business. After all, I spent thirty years building the thing up from scratch, and now the equipment is rusting and getting clogged with dirt. But even though I know it's silly of me to care what happens to the business, I borrow a body from a storage center every so often, and go around the old home town, and clean and oil as much of the equipment as I can.

Of course, all in the world the equipment was good for was making money, and Lord knows there's plenty of that lying around. Not as much as there used to be, because there at first some people got frisky and threw it all around, and the wind blew it every which way. And a lot of go-getters gathered up piles of the stuff and hid it somewhere. I hate to admit it, but I gathered up close to a half million myself and stuck it away. I used to get it out and count it sometimes, but that was years ago. Right now I'd be hard put to say where it is.

But the worrying I do about my old business is bush league stuff compared to the worrying my wife, Madge, does about our old house. That thing is what she herself put in thirty years on while I was building the business. Then no sooner had we gotten nerve enough to build and decorate the place than everybody we cared anything about got amphibious. Madge borrows a body once a month and dusts the place, though the only thing a house is good for now is keeping termites and mice from getting pneumonia.

Whenever it's my turn to get into a body and work as an attendant at the local storage center, I realize all over again how much tougher it is for women to get used to being amphibious.

Madge borrows bodies a lot oftener than I do, and that's true of women in general. We have to keep three times as many women's bodies in stock as men's bodies, in order to meet the demand. Every so often, it seems as though a woman just *has* to have a body, and doll it up in clothes, and look at herself in a mirror. And Madge, God bless her, I don't think she'll be satisfied until she's tried on every body in every storage center on Earth.

It's been a fine thing for Madge, though. I never kid her about it, because it's done so much for her personality. Her old body, to tell you the plain blunt truth, wasn't anything to get excited about, and having to haul the thing around made her gloomy a lot of the time in the old days. She couldn't help it, poor soul, any more than anybody else could help what sort of body they'd been born with, and I loved her in spite of it.

Well, after we'd learned to be amphibious, and after we'd built the storage centers and laid in body supplies and opened them to the public, Madge went hog wild. She borrowed a platinum blonde body that had been donated by a burlesque queen, and I didn't think we'd ever get her out of it. As I say, it did wonders for her self-confidence.

I'm like most men and don't care particularly what body I get. Just the strong, good-looking, healthy bodies were put in storage,

so one is as good as the next one. Sometimes, when Madge and I take bodies out together for old times' sake, I let her pick out one for me to watch whatever she's got on. It's a funny thing how she always picks a blond, tall one for me.

My old body, which she claims she loved for a third of a century, had black hair, and was short and paunchy, too, there toward the last. I'm human and I couldn't help being hurt when they scrapped it after I'd left it, instead of putting it in storage. It was a good, homy, comfortable body; nothing fast and flashy, but reliable. But there isn't much call for that kind of body at the centers, I guess. I never ask for one, at any rate.

The worst experience I ever had with a body was when I was flimflammed into taking out the one that had belonged to Dr. Ellis Konigswasser. It belongs to the Amphibious Pioneers' Society and only gets taken out once a year but for the big Pioneers' Day Parade, on the anniversary of Konigswasser's discovery. Everybody said it was a great honor for me to be picked to get into Konigswasser's body and lead the parade.

Like a plain damn fool, I believed them.

They'll have a tough time getting me into that thing again—ever. Taking that wreck out certainly made it plain why Konigswasser discovered how people could do without their bodies. That old one of his practically *drives* you out. Ulcers, headaches, arthritis, fallen arches—a nose like a pruning hook, piggy little eyes, and a complexion like a used steamer trunk. He was and still is the sweetest person you'd ever want to know, but, back when he was stuck with that body, nobody got close enough to find out.

We tried to get Konigswasser back into his old body to lead us when we first started having the Pioneers' Day Parade, but he wouldn't have anything to do with it, so we always have to flatter some poor boob into taking on the job. Konigswasser marches, all right, but as a six-foot cowboy who can bend beer cans double between his thumb and middle finger.

Konigswasser is just like a kid with that body. He never gets tired of bending beer cans with it, and we all have to stand around in our bodies after the parade, and watch as though we were very impressed.

I don't suppose he could bend very much of anything back in the old days.

Nobody mentions it to him, since he's the grand old man of the Amphibious Age, but he plays hell with bodies. Almost every time he takes one out, he busts it, showing off. Then somebody has to get into a surgeon's body and sew it up again.

I don't mean to be disrespectful of Konigswasser. As a matter of fact, it's a respectful thing to say that somebody is childish in certain ways, because it's people like that who seem to get all the big ideas.

There is a picture of him in the old days down at the Historical Society, and you can see from that that he never did grow up as far as keeping up his appearance went—doing what little he could with the rattle-trap body Nature had issued him.

His hair was down below his collar, he wore his pants so low that his heels wore through the legs above the cuffs, and the lining of his coat hung down in festoons all around the bottom. And he'd forget meals, and go out into the cold or wet without enough clothes on, and he would never notice sickness until it almost killed him. He was what we used to call absent-minded. Looking back now, of course, we say he was starting to be amphibious.

Konigswasser was a mathematician, and he did all his living with his mind. The body he had to haul around with that wonderful mind was about as much use to him as a flat car of scrap-iron. Whenever he got sick and *had* to pay some attention to his body, he'd rant somewhat like this:

"The mind is the only thing about human beings that's worth anything. Why does it have to be tied to a bag of skin, blood, hair, meat, bones, and tubes? No wonder people can't get anything done, stuck for life with a parasite that has to be stuffed with food and protected from weather and germs all the time. And the fool thing wears out anyway—no matter how much you stuff and protect it!

"Who," he wanted to know, "really wants one of the things? What's so wonderful about protoplasm that we've got to carry so damned many pounds of it with us wherever we go?

"Trouble with the world," said Konigswasser, "isn't too many people—it's too many bodies."

When his teeth went bad on him, and he had to have them all out, and he couldn't get a set of dentures that were at all comfortable, he wrote in his diary, "If living matter was able to evolve enough to get out of the ocean, which was really quite a pleasant place to live, it certainly ought to be able to take another step and get out of bodies, which are pure nuisances when you stop to think about them."

He wasn't a prude about bodies, understand, and he wasn't jealous of people who had better ones than he did. He just thought bodies were a lot more trouble than they were worth.

He didn't have great hopes that people would really evolve out

of their bodies in his time. He just wished they would. Thinking hard about it, he walked through a park in his shirtsleeves and stopped off at the zoo to watch the lions being fed. Then, when the rainstorm turned to sleet, he headed back home and was interested to see firemen on the edge of a lagoon, where they were using a pulmotor on a drowned man.

Witnesses said the old man had walked right into the water and had kept going without changing his expression until he'd disappeared. Konigswasser got a look at the victim's face and said he'd never seen a better reason for suicide. He started for home again and was almost there before he realized that that was his own body lying back there.

He went back to reoccupy the body just as the firemen got it breathing again, and he walked it home, more as a favor to the city than anything else. He walked it into his front closet, got out of it again, and left it there.

He took it out only when he wanted to do some writing or turn the pages of a book, or when he had to feed it so it would have enough energy to do the few odd jobs he gave it. The rest of the time, it sat motionless in the closet, looking dazed and using almost no energy. Konigswasser told me the other day that he used to run the thing for about a dollar a week, just taking it out when he really needed it.

But the best part was that Konigswasser didn't have to sleep any more, just because *it* had to sleep; or be afraid any more, just because *it* thought it might get hurt; or go looking for things *it* seemed to think it had to have. And, when *it* didn't feel well, Konigswasser kept out of it until it felt better, and he didn't have to spend a fortune keeping the thing comfortable.

When he got his body out of the closet to write, he did a book on how to get out of one's own body, which was rejected without comment by twenty-three publishers. The twenty-fourth sold two million copies, and the book changed human life more than the invention of fire, numbers, the alphabet, agriculture, or the wheel. When somebody told Konigswasser that, he snorted that they were damning his book with faint praise. I'd say he had a point there.

By following the instructions in Konigswasser's book for about two years, almost anybody could get out of his body whenever he wanted to. The first step was to understand what a parasite and dictator the body was most of the time, then to separate what the body wanted or didn't want from what you yourself—your psyche—wanted or didn't want. Then, by concentrating on what you wanted, and ignoring as much as possible what the body

wanted beyond plain maintenance, you made your psyche demand its rights and become self-sufficient.

That's what Konigswasser had done without realizing it, until he and his body had parted company in the park, with his psyche going to watch the lions eat, and with his body wandering out of control into the lagoon.

The final trick of separation, once your psyche grew independent enough, was to start your body walking into some direction and suddenly take your psyche off in another direction. You couldn't do it standing still, for some reason—you had to walk.

At first, Madge's and my psyches were clumsy at getting along outside our bodies, like the first sea animals that got stranded on land millions of years ago, and who could just waddle and squirm and gasp in the mud. But we became better at it with time, because the psyche can naturally adapt so much faster than the body.

Madge and I had good reason for wanting to get out. Everybody who was crazy enough to try to get out at the first had good reasons. Madge's body was sick and wasn't going to last a lot longer. With her going in a little while, I couldn't work up enthusiasm for sticking around much longer myself. So we studied Konigswasser's book and tried to get Madge out of her body before it died. I went along with her, to keep either one of us from getting lonely. And we just barely made it—six weeks before her body went all to pieces.

That's why we get to march every year in the Pioneers' Day Parade. Not everybody does—only the first five thousand of us who turned amphibious. We were guinea pigs, without much to lose one way or another, and we were the ones who proved to the rest how pleasant and safe it was—a heck of a lot safer than taking chances in a body year in and year out.

Sooner or later, almost everybody had a good reason for giving it a try. There got to be millions and finally more than a billion of us—invisible, insubstantial, indestructible, and, by golly, true to ourselves, no trouble to anybody, and not afraid of anything.

When we're not in bodies, the Amphibious Pioneers can meet on the head of a pin. When we get into bodies for the Pioneers' Day Parade, we take up over fifty thousand square feet, have to gobble more than three tons of food to get enough energy to march; and lots of us catch colds or worse, and get sore because somebody's body accidentally steps on the heel of somebody else's body, and get jealous because some bodies get to lead and others have to stay in ranks, and—oh, hell, I don't know what all.

I'm not crazy about the parade. With all of us there, close to-

as she tried to get a close look at what they had in the way of ladies' ready-to-wear.

"Let's beat it," I said.

"I'm just looking," said Madge. "No harm in looking."

Then she saw what was in the main display case, and she forgot where she was or where she'd come from.

The most striking woman's body I'd ever seen was in the case—six feet tall and built like a goddess. But that wasn't the payoff. The body had copper-colored skin, chartreuse hair and fingernails, and a gold lamé evening gown. Beside that body was the body of a blond, male giant in a pale blue field marshal's uniform, piped in scarlet, and spangled with medals.

I think the enemy must have swiped the bodies in a raid on one of our outlying storage centers, and padded and dyed them, and dressed them up.

"Madge, come back!" I said.

The copper-colored woman with the chartreuse hair moved. A siren screamed and soldiers rushed from hiding places to grab the body Madge was in.

The center was a trap for amphibians!

The body Madge hadn't been able to resist had its ankles tied together, so Madge couldn't take the few steps she had to take if she was going to get out of it again.

The soldiers carted her off triumphantly as a prisoner of war. I got into the only body available, the fancy field marshal, to try to help her. It was a hopeless situation, because the field marshal was bait, too, with its ankles tied. The soldiers dragged me after Madge.

The cocky young major in charge of the soldiers did a jig along the shoulder of the road, he was so proud. He was the first man ever to capture an amphibian, which was really something from the enemy's point of view. They'd been at war with us for years, and spent God knows how many billions of dollars, but catching us was the first thing that made any amphibians pay much attention to them.

When we got to the town, people were leaning out of windows and waving their flags, and cheering the soldiers, and hissing Madge and me. Here were all the people who didn't want to be amphibious, who thought it was terrible for anybody to be amphibious—people of all colors, shapes, sizes, and nationalities, joined together to fight the amphibians.

It turned out that Madge and I were going to have a big trial.

After being tied up every which way in jail all night, we were taken to a court room, where television cameras stared at us.

Madge and I were worn to frazzles, because neither one of us had been cooped up in a body that long since I don't know when. Just when we needed to think more than we ever had, in jail before the trial, the bodies developed hunger pains and we couldn't get them comfortable on the cots, no matter how we tried; and, of course, the bodies just had to have their eight hours sleep.

The charge against us was a capital offense on the books of the enemy—*desertion*. As far as the enemy was concerned, the amphibians had all turned yellow and run out on their bodies, just when their bodies were needed to do brave and important things for humanity.

We didn't have a hope of being acquitted. The only reason there was a trial at all was that it gave them an opportunity to sound off about why they were so right and we were so wrong. The court room was jammed with their big brass, all looking angry and brave and noble.

"Mr. Amphibian," said the prosecutor, "you are old enough, aren't you, to remember when all men had to face up to life in their bodies, and work and fight for what they believed in?"

"I remember when the bodies were always getting into fights, and nobody seemed to know why, or how to stop it," I said politely. "The only thing everybody seemed to believe in was that they didn't like to fight."

"What would you say of a soldier who ran away in the face of fire?" he wanted to know.

"I'd say he was scared silly."

"He was helping to lose the battle, wasn't he?"

"Oh, sure." There wasn't any argument on that one.

"Isn't that what the amphibians have done—run out on the human race in the face of the battle of life?"

"Most of us are still alive, if that's what you mean," I said.

It was true. We hadn't licked death, and weren't sure we wanted to, but we'd certainly lengthened life something amazing, compared to the span you could expect in a body.

"You ran out on your responsibilities!" he said.

"Like you'd run out of a burning building, sir," I patiently explained.

"Leaving everyone else to struggle on alone!"

"They can all get out the same door that we got out of. You can all get out any time you want to. All you do is figure out what you want and what your body wants, and concentrate on—"

The judge banged his gavel until I thought he'd split it. Here they'd burned every copy of Königswasser's book they could find, and there I was giving a course in how to get out of a body over a whole television network.

"If you amphibians had your way," said the prosecutor, "everybody would run out on his responsibilities, and let life and progress as we know them disappear completely."

"Why, sure," I agreed. "That's the point."

"Men would no longer work for what they believe in?" he challenged.

"I had a friend back in the old days who drilled holes in little square thingamajigs for seventeen years in a factory, and he never did get a very clear idea of what they were for. Another one I knew grew raisins for a glassblowing company, and the raisins weren't for anybody to eat, and he never did find out why the company bought them. Things like that make me sick—now that I'm in a body, of course—and what I used to do for a living makes me even sicker."

"Then you despise human beings and everything they do," he said.

"I like them fine—better than I ever did before. I just think it's a dirty shame what they have to do to take care of their bodies. You ought to get amphibious and see how happy people can be when they don't have to worry about where their body's next meal is coming from, or how to keep it from freezing in the wintertime, or what's going to happen to them when their body wears out."

"And that, sir, means the end of ambition, the end of greatness!"

"Oh, I don't know about that," I said. "We've got some pretty great people on our side. They'd be great in or out of bodies. It's the end of fear is what it is." I looked right into the lens of the nearest television camera. "And *that's* the most wonderful thing that ever happened to people."

Down came the judge's gavel again, and the brass started to shout me down. The television men turned off their cameras frantically, and all the spectators, except for the biggest brass, were cleared out. I knew I'd really said something. All anybody would be getting on his television set now was organ music.

When the confusion died down, the judge said the trial was over, and that Madge and I were guilty of desertion.

Nothing I could do could get us in any worse, so I talked back.

"Now I understand you poor fish," I said. "You couldn't get along without fear. That's the only skill you've got—how to scare yourselves and other people into doing things. That's the only fun

you've got, watching people jump for fear of what you'll do to their bodies or take away from their bodies."

Madge got in her two cents' worth. "The only way you can get any response from anybody is to scare them."

"Contempt of court!" said the judge.

"The only way you can scare people is if you can keep them in their bodies," I told him.

The soldiers grabbed Madge and me and started to drag us out of the court room.

"This means war!" I yelled.

Everything stopped right there and the place got very quiet.

"We're already at war," said a general uneasily.

"Well, *we're* not," I answered, "but we will be, if you don't untie Madge and me this instant." I was fierce and impressive in that field marshal's body.

"You haven't any weapons," said the judge, "no knowhow. Outside of bodies, amphibians are nothing."

"If you don't cut us loose by the time I count ten," I told him, "the amphibians will occupy the bodies of the whole kit and caboodle of you and march you right off the nearest cliff. The place is surrounded." That was hogwash, of course. Only one person can occupy a body at a time, but the enemy couldn't be sure of that. "One! Two! Three!"

The general swallowed, turned white, and waved his hand vaguely.

"Cut them loose," he said weakly.

The soldiers, terrified, too, were glad to do it. Madge and I were freed.

I took a couple of steps, headed my spirit in another direction, and that beautiful field marshal, medals and all, went crashing down the staircase like a grandfather clock.

I realized that Madge wasn't with me. She was still in that copper-colored body with the chartreuse hair and fingernails.

"What's more," I heard her saying, "in payment for all the trouble you've caused us, this body is to be addressed to me at New York, delivered in good condition no later than next Monday."

"Yes, ma'am," said the judge.

When we got home, the Pioneers' Day Parade was just breaking up at the local storage center, and the Parade Marshal got out of his body and apologized to me for acting the way he had.

"Heck, Herb," I said, "you don't need to apologize. You weren't yourself. You were parading around in a body."

That's the best part of being amphibious, next to not being

afraid—people forgive you for whatever fool thing you might have done in a body.

Oh, there are drawbacks, I guess, the way there are drawbacks to everything. We still have to work off and on, maintaining the storage centers and getting food to keep the community bodies going. But that's a small drawback, and all the big drawbacks I ever heard of aren't real ones, just old-fashioned thinking by people who can't stop worrying about things they used to worry about before they turned amphibious.

As I say, the oldsters will probably never get really used to it. Every so often, I catch myself getting gloomy over what happened to the pay-toilet business it took me thirty years to build.

But the youngsters don't have any hangovers like that from the past. They don't even worry much about something happening to the storage centers, the way us oldsters do.

So I guess maybe that'll be the next step in evolution—to break clean like those first amphibians who crawled out of the mud into the sunshine, and who never did go back to the sea.
